SKILLS

React.js

PHP

HTML/CSS

Mobile Application

Javascript

UX/UI

EDUCATION

High School
D.A.V. college

2017-2019

BCA
D.A.V. college

2019 - 2024

SOFT SKILLS

Communication

Collaboration

Time Management

ABOUT ME

Enthusiastic IT student with a keen interest in technologies and a solid foundation in computer science. Demonstrated ability to grasp new concepts and technologies, coupled with a passion for problem solving. Eager to leverage academic knowledge and contribute to dynamic team helping to develop my technical skills.

COLLEGE PROJECTS

Jan 2022-June 2022

HamroMart | E-Commerce Website

It is an e-commerce website that is used to buy and sell second hand products which can be reused and can be useful for somebody else in an affordable price. It is built using Microsoft Visual Studio, XAMPP, JavaScript, MySQL.

June 2023-Aug 2023

Weather App | Mobile App

A weather app made using OpenWeather API in Java. The app tells the current temperature and some additional information like Humidity, Highest Temperature, Lowest Temperature, Wind Speed, Pressure. It displays the weather minute basis accurately, hourly, daily, weekly and even monthly.

April 2023-Aug 2023

FitMeasure | Mobile App

It is a mobile app that is used to calculate the user's BMI (Body Mass Index) using their height, weight, age, gender and gives the suitable result according to the information they have provided. After the result is provided it also gives the advice according to the calculated result. The results can be like over weight, under weight, normal etc.

July 2024-Oct 2023

Bird Species Identification using audio and images

The Bird Species Identification Project utilizes machine learning techniques to classify birds based on both audio recordings and images. It extracts MFCCs and spectrograms from bird calls for audio classification using LSTM networks and employs CNN-based models like ResNet or VGG16 for image recognition. The system allows users to upload either an audio or image file, processes it through trained models, and predicts the bird species with confidence scores. Built with Streamlit, it provides an interactive interface with user authentication for secure access.

Feb 2024 - June 2024

INTERNSHIP AT SPYDERS LAB PVT.LTD

During my internship at Spyders Lab, I focused on improving my skills in React.js, a powerful front-end library for building user interfaces. I gained hands-on experience working with various techniques such as component lifecycle methods, hooks, state management, and routing. This opportunity allowed me to deepen my understanding of React's architecture and improve my ability to build dynamic, responsive applications efficiently.
